Sfil (ggccgctcggcc); Site_2: Sfil (ggccattatggcc);
Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptors were used in cloning as follows: 5'
adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCGAGGCGCACATG-dT(30)BN-3'
(where B = A, C, Or G and N = A, C, G, or T). Average
insert size 1.75 kb (range 0.9-4.0 kb): 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC
Library."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New dual-specificity phosphatase (DSP)-3 and DSP-3 alternate form polypeptides, useful for identifying modulators DSP-3 or DSP-3 alternate form activity, especially for treating e.g. cancer, autoimmune diseases or allergies.

Claim 7; Fig 1; 86pp; English.

The present sequence is given in a specification providing human dual specificity phosphatase-3 (DSP-3) and a murine DSP-3 variant polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                          ö
The polypeptides are useful for dephosphorylating a substrate of DSP-3, e.g. MAP-kinase. They may be used to treat or prevent diseases associated with cell proliferation, immunosuppression, metabolic diseases, or abnormal cell growth or cell cycle abnormalities. They are also useful for identifying agents that modulate their activity. The modulators are activity, e.g. Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormalities. The modulating agents are useful for modulating agents are useful for modulating agents are useful for modulating, modifying or altering cellular responses, e.g. in vivo or in vitro cell proliferation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                840

ACC69489 to ACC69495 encode the human dual-specificity phosphatases
designated DSP-18a to DSP-19f and prototypical DSP-18pr given in ABR43450
to ABR43456. DSP-18 proteins have the ability to dephosphorylate an
activated mitogen activated protein (MAP) *kinase. DSP-18 sequences have
cytostatic, immunosuppressive and antiallergic activities, and can be
cytostatic, immunosuppressive and antiallergic activities, and can be
cytostatic, immunosuppressive and antiallergic activities, and can be
cytostatic as mediators of MAP. *kinases and signal transduction. The DSP-18
proteins can be used for identifying antibodies and other modulators
(particularly inhibitors) of DSP-18 activity. The DSP-18 proteins may be
survival, or to treat diseases associated with cell proliferation,
differentiation or survival. The DSP-18 proteins are especially useful
controlled to a curvival and the disease associated with cell proliferation of DSP-18
DSP-18 aubstrates. A modulator of
DSP-18 activity can be used for modulating a proliferative response in a
cell, differentiation of a cell or survival of a cell, or for treating a
cell, differentiation of a cell or survival of a cell, or for treating a
cell, differentiation of a cell or survival disease
controlled the disparse of the disease and cell or cell, or for treating a
cell, differentiation of a cell or survival disease all arrived by
controlled the disparse of the disease and cell or cell
                                                                                                                                                                                                                                                                                    New DSP-18 dual-specificity phosphatases, useful for modulating cell proliferation, differentiation or survival, or for identifying modulators of DSP-18 activity for treating e.g. cancer or graft-versus-host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cancer, graft-versus host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation, cell cycle abnormalities associated with DSP-18 activity. The present sequence represents a human DSP-3 polymucleotide sequence which is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 926 BP; 233 A; 230 C; 242 G; 221 T; 0 U; 0 Other;

This invention describes novel small interfering RNA (siRNA) polynucleotides capable of interfering with expression of a polypeptide having protein-tyrosine-phosphatase (PTP) activity. The products of the invention have cytostatic, immunomodulator, antimicrobial, antidiabetic and anorectic activity. The methods and compositions of the present invention are useful for treating diseases or conditions associated with aberrant expression or activity of the protein tyrosine phosphatase, such as cancer, autoimmune diseases, infection, inflammation, diabetes and obesity. This sequence represents a siRNA directed against dual specificity phosphatase (DSP) expression.
                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU3814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), arthritis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. AIDS) authorion disorders (e.g. asthma), cardiovascular disorders (e.g. Inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. Inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. Inflammatory disorders (e.g. thempolila), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Inflammatory disorders (e.g. thempolila), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Inflammatory disorders (e.g. in

                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21869-AAU21851), and cDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem of disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem of lioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system of disorders, muscular disorders, rapidovascular disorders, anscholective disorders, cardiovascular disorders and renal disorders, pulmonary disorders, cardiovascular disorders and renal calsorders. The polymucleotide sequences of the invention are also useful in gene therapy. AAS34767-AAS35050 represent cDNA sequences encoding for the novel human neoplastic disease associated polypeptides of the invention. Note: The sequence data for this patent did not form part of two mine printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's disease

239; 302pp; English ဋ SEQ ID Claim 1;

The invention relates to one of 238 disclosed human neoplastic diseaseassociated polypeptides encoded by 171 disclosed cDNA sequences
(including their domains, epitopes, full-length proteins, allelic variants
or species homologues). Also included are there encoding nucleic acids,
a recombinant vector comprising the nucleic acid, a recombinant host cell
comprising the nucleic acid (expressing the protein), an isolated
antibody that binds specifically to the isolated polypeptide, preventing,
treating or ameliorating a medical condition, diagnosing a pathological
condition or a usceptibility to a pathological condition in a subject,
identifying a binding partner to the polypeptide, identifying an activity
in a biological assay, and the gene corresponding to the cDNA sequence.
The polypeptides, polynuclectides and antibodies are useful for
detecting, preventing, diagnosing, prognosticating, treating or
ameliorating medical conditions such as hyperproliferative diseases or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or haematologic disorders (e.g.
canaemia or thrombocytopaenia), allergic reactions including asthma or
eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury, 88888888888888888888888888888888888

(HUMA-) HUMAN GENOME

Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders

Claim 4; SEQ ID NO 1406; 2081pp + Sequence Listing; English

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are useful in isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, andiporation archritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to phosphatase proteins and coding sequences. The present sequence is one such phosphatase coding sequence. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phosphorylation of serine, threomine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, sprovial sarcomas, renal cell carcinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, pathophysiological hypoxia, cardiac dysfunction and/or vascular disorders, myopathies, congenital muscle disorders, Papillon-Lefevre syndrome, Cowden disease, ectodermal dysplania, Moeblus syndrome, blornstad syndrome, schizophrenia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The present sequence, the coding portion of which is also claimed, encodes human mitogen-activated protein kinase phosphatase X (MKPX). MKPX is amplified and overexpressed in human cancers, including colon cancer, ovarian cancer and prostate cancer. The MKPX gene, its expressed protein products and antibodies can be used diagnostically or as targets for cancer therapy or vaccine. They are also used to identify compounds and reagents useful in cancer diagnosis, prevention and therapy, and for determining the efficacy of a therapeutic treatment regimen in a patient. A claimed method of blocking in vivo expression of the gene involves administering a vector encoding MKPX small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CCCCGCCCCTCCTCCTCTTGTAACATGCCATAGTGCGCCTGCGGCCACCACGCCGGGGC 425

The present invention describes an isolated cancer associated phosphatase nucleic acid. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function: (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer associated phosphatase, where the tragtes are associated with signal transduction in cancer cell; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour comprising a pharmaceutical carrier and (6); (7) methods for treating a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, immunosuppressive, antidiabletic, neuroprotective, antidhematic, antiathritic, antidateses and nucleic acids encoding the proteins are useful for visualising tumours in patients or diagnosing and treating cancer, e.g. phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or colon cancer. The polypeptides and curleic acids encoding the proteins are useful for visualising tumours in patients or colon cancer. The polypeptides and curleic acids may also be used for treating hyperproliferative diseases, cuch as autoimmune disease, diabetes mellitus, multiple sclerosis, cuch as autoimmune disease, diabetes mellitus, multiple sclerosis, chemmatoid arthritis, psoriasis, atherosclerosis, inflammation, scarring, determining patient prognosis, or as targets for screening pharmaceutical agents that inhibit the growth or metaetsasis of tumour cells. The present associated phosphatase MKPX, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88 GGAATGGGATGAACAAGATCCTGCCCGGCCTGTACATCGGCAACTTCAAAGATGCCAGAG 147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      67 GGAATGGGATGAACAAGATCCTGCCCGGCCTGTACATCGGCAACTTCAAAGATGCCAGAG 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps 0;
                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indohence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          67 GGAATGGGATGAACAAGATCCTGCCCGGCCTGTACATCGGCAACTTCAAAGATGCCAGAG 126

UniProt\_03:\*
1: uniprot\_sprot:\*
2: uniprot\_trembl:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
